WEB PAGE 01

DIGITAL LIBRARY MANAGEMENT

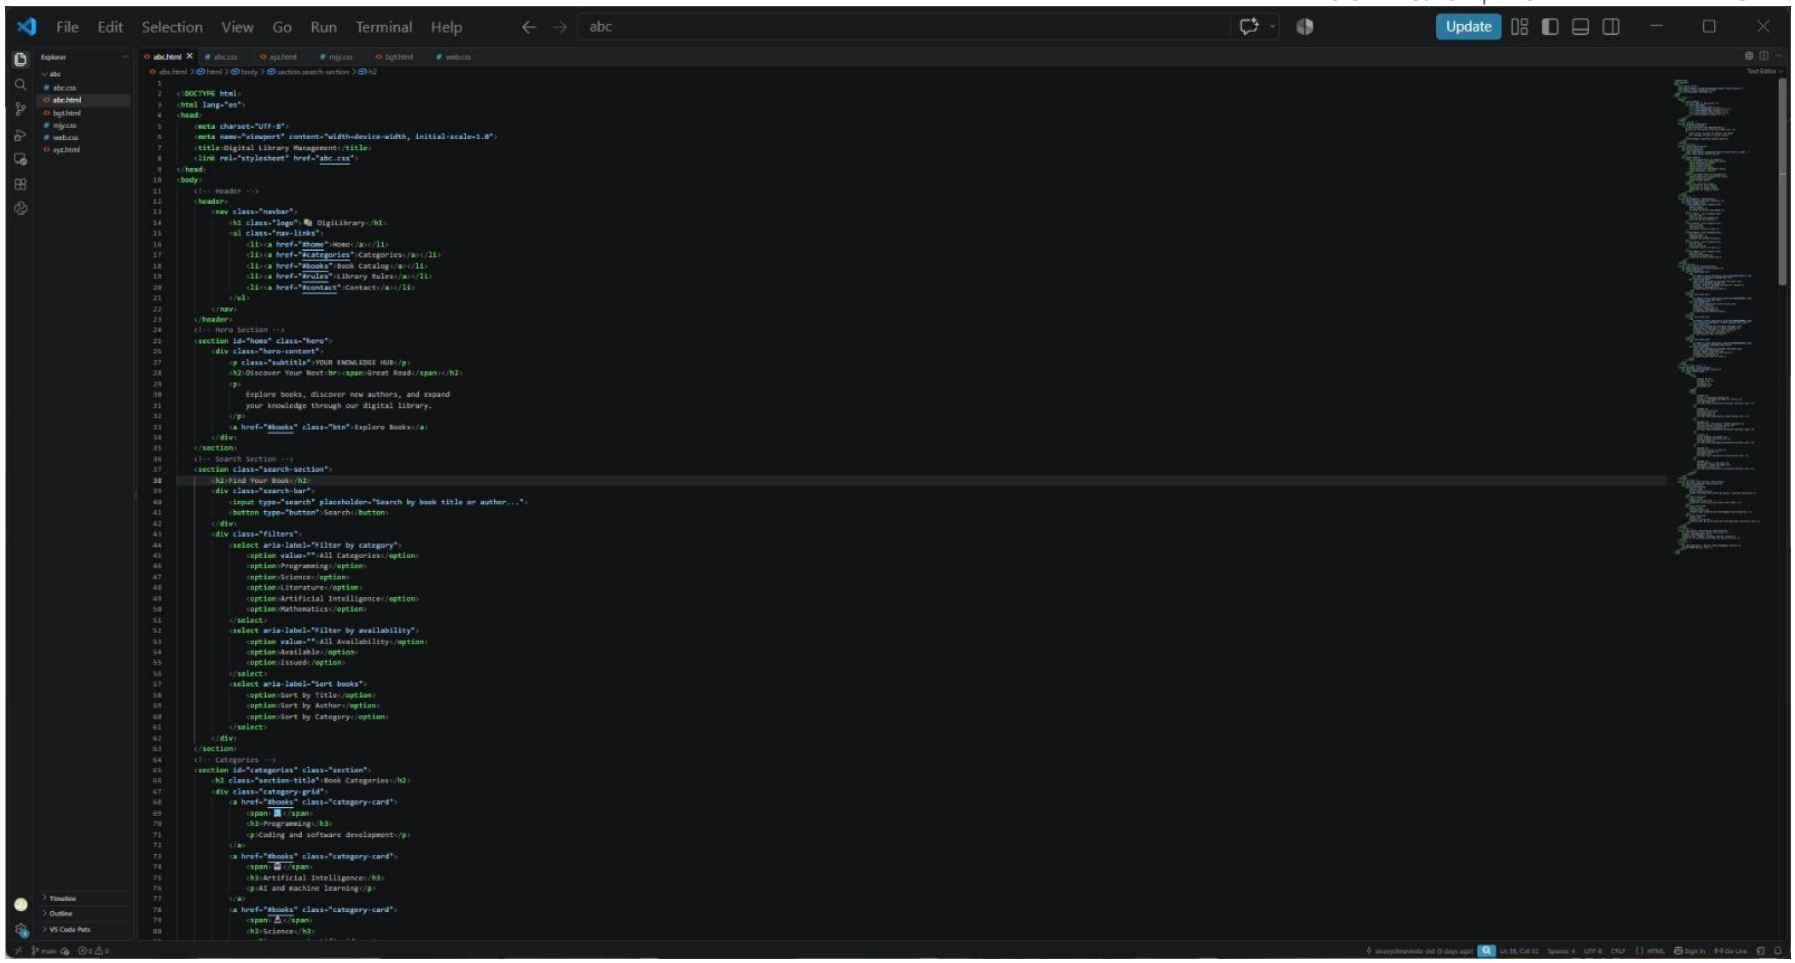

HTML and CSS Website Design

Website Description

The Digital Library Management website is designed to help users explore books in an organized and user-friendly way. The page includes a navigation bar, a welcome banner, a book search area, category cards, featured books, and a book catalog. Its clean layout and simple navigation make it easier for visitors to discover books by title, author, category, or availability.

HTML Code

HTML (HyperText Markup Language) is used to create the structure and content of the webpage. The screenshot below shows the HTML file written in Visual Studio Code.

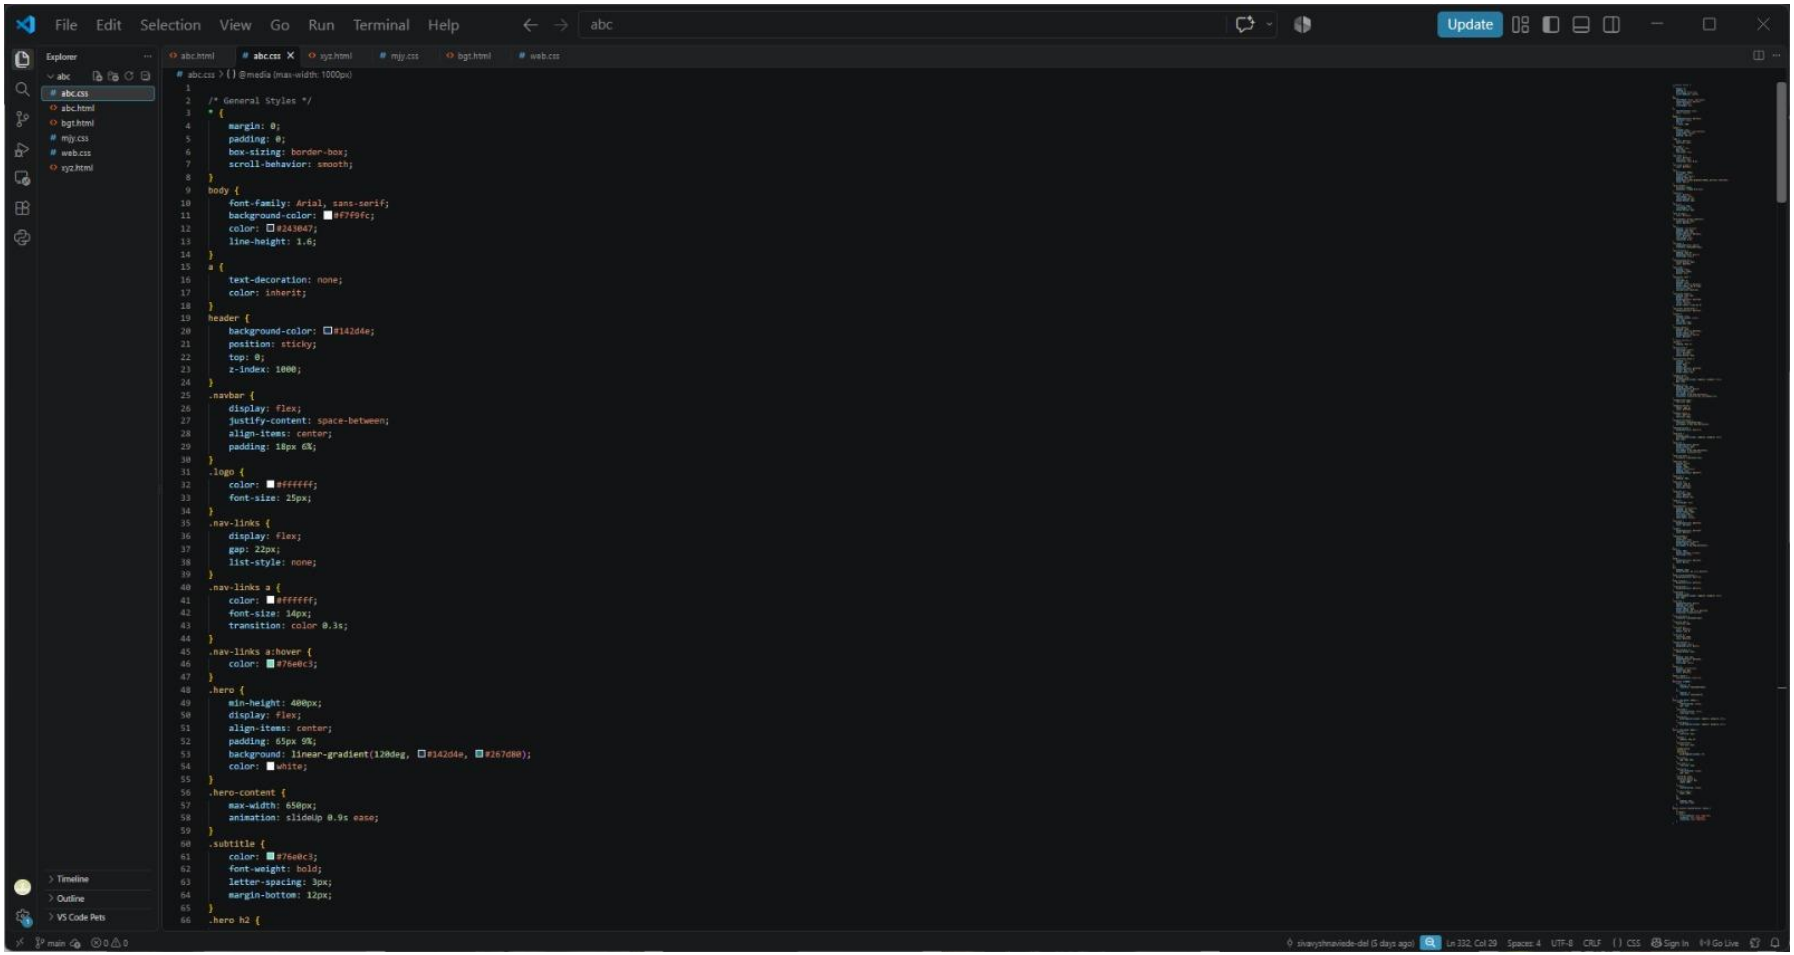

What I used in HTML:

- The <!DOCTYPE html>, <html>, <head>, and <body> elements to define the webpage.
- A page title and a linked CSS stylesheet to connect the design.
- Header and navigation links for Home, Categories, Book Catalog, Library Rules, and Contact.
- Sections, headings, paragraphs, links, input fields, buttons, and dropdown menus to organize the page.
- Category cards and book-related content to present library information.

CSS Code

CSS (Cascading Style Sheets) is used to control the appearance, spacing, colors, and layout of the webpage. The screenshot below shows the CSS styles used for the Digital Library Management website.

```css
/* General Styles */
* {
    margin: 0;
    padding: 0;
    box-sizing: border-box;
    scroll-behavior: smooth;
}
body {
    font-family: Arial, sans-serif;
    background-color: #f7f9fc;
    color: #243047;
    line-height: 1.6;
}
a {
    text-decoration: none;
    color: inherit;
}
header {
    background-color: #142d4e;
    position: sticky;
    top: 0;
    z-index: 1000;
}
.navbar {
    display: flex;
    justify-content: space-between;
    align-items: center;
    padding: 18px 6%;
}
.logo {
    color: #ffffff;
    font-size: 25px;
}
.nav-links {
    display: flex;
    gap: 22px;
    list-style: none;
}
.nav-links a {
    color: #ffffff;
    font-size: 14px;
    transition: color 0.3s;
}
.nav-links a:hover {
    color: #76e0c3;
}
.hero {
    min-height: 400px;
    display: flex;
    align-items: center;
    padding: 65px 9%;
    background: linear-gradient(120deg, #142d4e, #267d80);
    color: white;
}
.hero-content {
    max-width: 650px;
    animation: slideUp 0.9s ease;
}
.subtitle {
    color: #76e0c3;
    font-weight: bold;
    letter-spacing: 3px;
    margin-bottom: 12px;
}
.hero h2 {
```

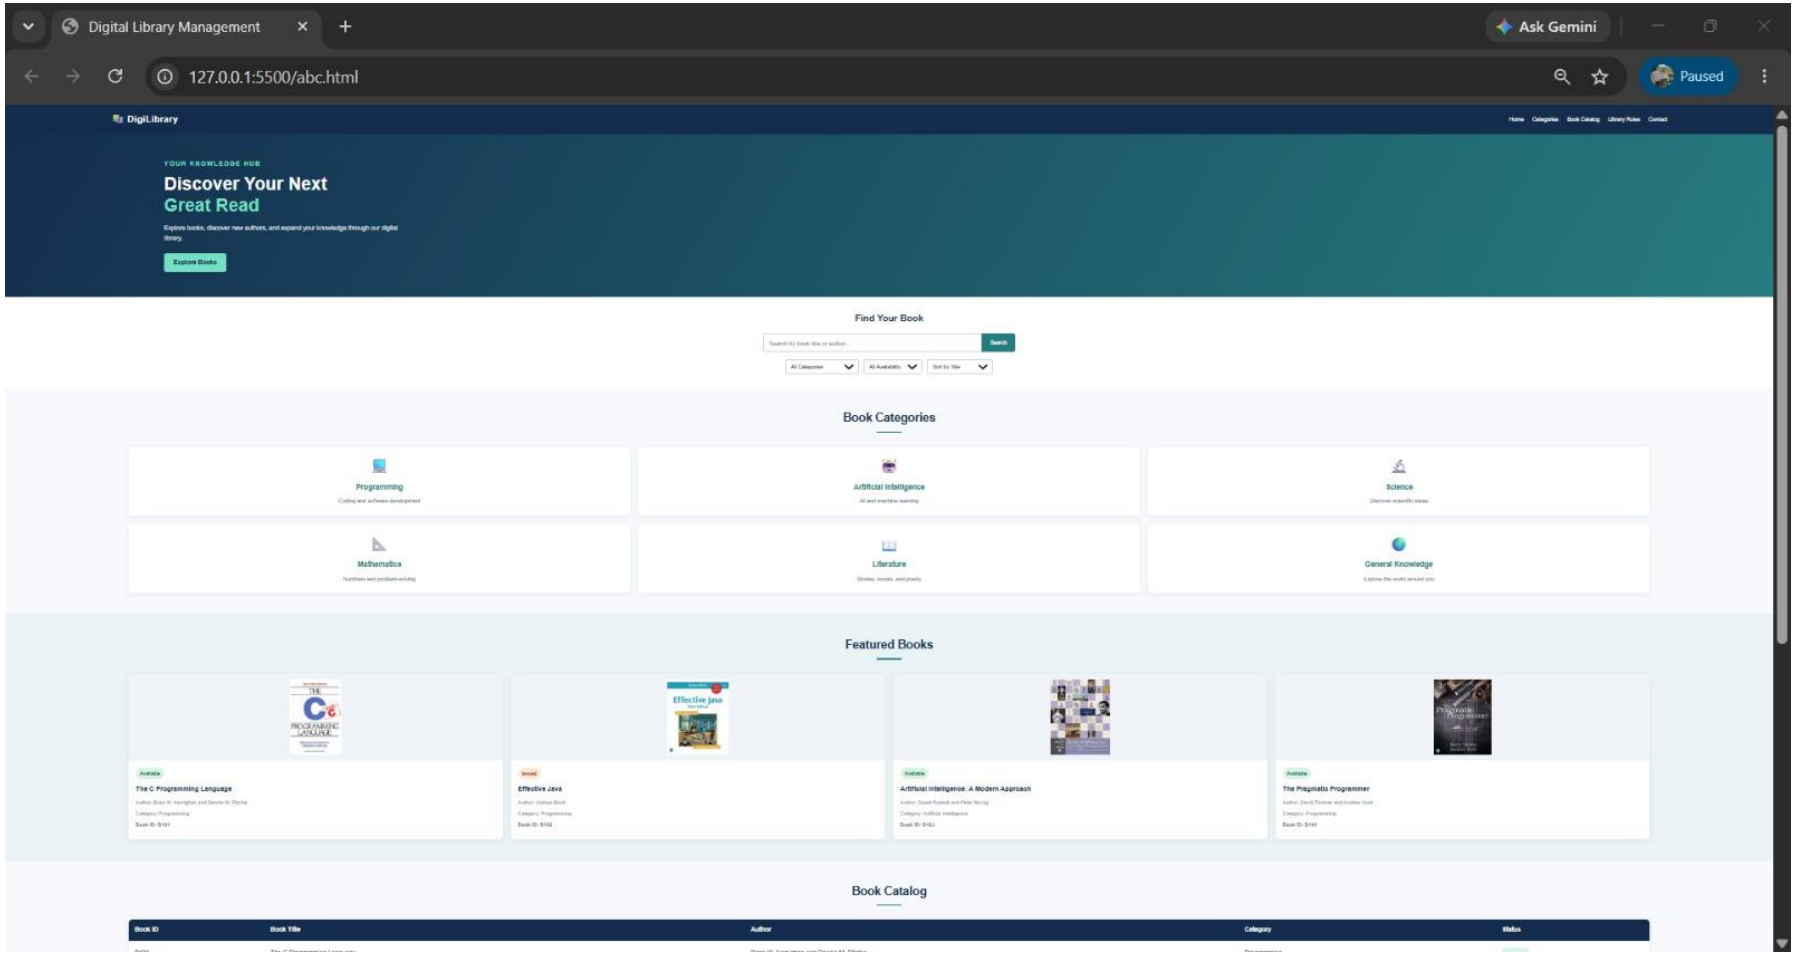

What I used in CSS:

- A universal selector to reset margins and padding and apply box-sizing.
- Body styles to set the font, background color, text color, and line spacing.
- Header and navigation styles to create a dark-colored top bar and arrange links using Flexbox.
- A gradient background and spacing for the hero section.

• Colors, font sizes, hover effects, and transitions to improve readability and interaction.
• Layout and card styles to make categories and featured books appear neatly.

Output

The following screenshot shows the final webpage displayed in a web browser. The HTML structure and CSS styling work together to produce the Digital Library Management interface.

Output Description:

The final page displays the DigiLibrary navigation bar, a welcome banner titled “Discover Your Next Great Read,” a book search and filter section, book

categories, featured book cards, and the beginning of the book catalog. The dark blue and teal color scheme, clear sections, and card-based layout give the website a neat and professional appearance.

Conclusion: This project demonstrates how HTML builds a webpage structure and CSS improves its visual presentation.
